DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4, 10, 14 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by White 2,748,921.

White discloses a rotary conveyor comprising:

- a rotatable drum-shaped shell (10) with openings (Column 3, line 69-71)
- a non-rotating eccentric axle (36) inside the shell
- finger supports (portion connecting the fingers 40 or 39) rotatively mounted parallel to the non-rotating eccentric axle by bearings (38)
- a plurality of fingers (39, 40) on each support next to each other

In regards to claim 2, the portion of the shell with fingers has three finger supports (Fig. 2).

In regards to claim 3, the finger supports are offset relative to one another (Fig. 2).

In regards to claim 4, the finger supports are identical to one another (Fig. 2).

In regards to claim 14, the fingers are inherently removable.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over White and FR 1,495,238, cited by applicant, (Bautz).

White discloses the claimed invention as detailed above, except for attaching the fingers to the finger support by threaded openings and locking nuts and using multiple bearings to attach each finger support to the axle instead of one.

Like White, Bautz discloses the same type of rotary conveyor (Figures 1 and 2). The conveyor has finger supports attached to bearings that are attached to a fixed axle. However, Bautz attaches the fingers to the finger supports by screwing the fingers into threaded hole and providing a locking nut (Fig. 2). Bautz also attaches the finger supports to the axle with multiple bearings instead on a single bearing.

It would have been obvious to one having ordinary skill in the art a the time the invention was made, to attach the finger to the finger support in White by screwing the fingers into a threaded hole and providing a locking nut as in Bautz, in order to facilitate replacement of individual fingers and to use multiple bearings in White instead of a single bearing, in order to increase support of the finger support on the axle.
